

THE TIMBER SLATTED LITTER BIN

Probably the most widely used bin design currently available, the Timber Slatted litter bin has reached this prominence for many good reasons.

A relatively inexpensive bin solution, its timber cladding blends into its surroundings while still maintaining a high degree of aesthetic appeal. A strong steel frame as well as the option of a spun lid with a centre hole, adding security and strength to an already versatile combination. With the use of a bolt-down base plate, this bin can be installed on a variety of different surfaces.

Dimensions

Specifications

Construction

- Frame manufactured from mild steel flat bar.
- Consists of three vertical slats welded to top and base rings to form the frame.
- Hot dipped galvanised.
- 70mm x 20mm Kwila hardwood, fully dressed, and finished in a semi-transparent water based stain.
- 55lt capacity galvanised bin insert (spare or replacement inserts available).
- Complete with in-ground pole stand, 600mm long, 60mm OD.
- Insert able to be locked via top ring of frame.

Options

- Available in galvanised or galvanised / powdercoated finish in a variety of powder coat colours.
- Bolt-down base plate.
